Oberudorosne Zavodov Rezinoval Promyshlen
nosti. (Equipment of Factories in the Rubber
Industry.) I. M. Barskov. Moscow: Gosudarstvennyi
Nauchno-Tekhnicheskii Uchebno-Prakticheskiy
Kiberneticheskii Literaturnyi 1949, pp. 343. Price
12 rubles. After an introduction, the book is
divided into ten sections dealing respectively with
equipment for the preliminary treatment of
materials for rubber compounds, rolling machinery,
its types, principles, and operation, rubber mixers,
calenders, extriders, spreaders, and solution mixers,
curing machines and presses, machines for assembling
and the preliminary moulding of tyres, vulcanizing
apparatus, and reclaim machinery. A list of 19
references is given, followed by a subject index. - 8

"The Diagnosis and Treatment of the Sudeck Syndrome."

Budapest, Magyar Traumatologia, Orthopaedia es Helyreallito Sebeszet, Vol IX, No 2, 1966, pages 89-97.

Abstract: [Authors' English summary modified] The pathomechanism of the development of the Sudeck syndrome is discussed. The importance of prophylaxis is emphasized. In order to obtain early diagnosis and to control the treatment objectively, the importance of oscillometry and of the recording of skin temperature is emphasized in addition to repeated radiograms. As both tests are simple and easy to perform, their introduction in outpatient services is recommended. In differential diagnosis, the presence of a malignancy or tuberculotic bone changes should always be considered and excluded. A complex and thorough orthopaedic, medical and neurological therapy is recommended. 5 Eastern European, 32 Western references.

"The Methods and Results of the Treatment of Patients with Late Toxemia During Pregnancy."

Budapest, Orvosi Hetilap, Vol 107, No 12, 20 Mar 66, pages 529-532.

Abstract: [Authors' Hungarian summary modified] The methods and results of the treatment of patients with toxemia during late pregnancy, used and achieved by the authors, are reported. The importance of institutional treatment of pathological cases of pregnancy is stressed. The experiences are pointed out according to which such state of equilibrium can be achieved by suitable treatment which is of utmost importance in the prevention of both eclampsia and perinatal infant mortality. This problem includes the requirement that suitable institutional care must be provided for all pathological cases of pregnancy. All 5 references are Hungarian.

Technology of Cutting Tools (Cont.)

- PURPOSE: The monograph is approved by the Administration of Educational Institutions, Ministry of the Machine Tools and Tools Industry, as a textbook for technical schools specializing in machine tools, toolmaking, and machinery manufacture.
- COVERAGE: The book presents the fundamentals of technological processes in tool manufacture, including selection of equipment and attachments, as well as the order of manufacture processing of cutting tools. Examples of controlled standardized methods of manufacture are given and the technology of some widely used tools is discussed. Questions of economy and increased productivity as related to design of technological processes are also discussed. The book is based primarily on Russian work in the above fields. Persons credited with major contributions to the subject are Professors: Balakshin, B. S., Yegorov, M.Ye., Kashirin, A.I., Kovan, V.M., Semenchenko, I.I., Sokolovskiy, A.P., and Gal'tsov, A. D.

TITLE: Parameters of high-power transistors under saturation conditions

SOURCE: Elektrosvyaz', no. 3, 1966, 77-80

TOPIC TAGS: transistor, power transistor, germanium transistor

ABSTRACT: A new method (more accurate than the linear-approximation method) is suggested for calculating the relations between saturated-transistor currents and voltages. The new method is based on the well-known D. Ebers and D. Moll formulas for I-V characteristics of an ideal transistor; a coefficient H that characterizes the degree of transistor saturation is inserted into the above formulas. The emitter-collector voltage, under saturation conditions, is given

Card 1/2

UDC: 621.382.3

L 32670-60

ACC NR: AP6009499

by: $U_{sat} = U_0 [H^{-n} - K(H^{-m} - 1)]$, where U_0 is the voltage at the saturation-limit point and n, m, K are empirical coefficients (given for Soviet power transistor types).

The power dissipated in the transistor is given by: $P_t = U_0 I_s \left[\frac{H}{B_e} + H^{-n} - K(H^{-m} - 1) \right]$.

The above approximate formulas are claimed to be accurate for engineering purposes; they permit calculating the saturated transistor parameters if its static characteristic for the saturation limit is known. Orig. art. has: 2 figures and 6 formulas.
